# TIME

| No | Title | Description | Details |
|---|---|---|---|
| 1 | **Field-to-Record: Voice-to-Structured Clinical Note Generator** | Convert a first responder's spoken or typed on-scene notes into a structured, timestamped record of medications and procedures administered—the first link in an audit chain. | ● Speech/Text input → NER for drug/dosage/route/procedure → structured JSON/FHIR-lite output → human-readable document generation.<br>● Edge AI: Must work in offline mode.<br>● Use public de-identified clinical text corpora (n2c2, MIMIC-III) or self-recorded synthetic dictations—no real PHI. |
| 2 | **TruthGuard — Adversarial Verification for Multi-Agent Document Q&A** | Build a multi-agent system that answers questions from a document corpus — but where the corpus is deliberately *inconsistent* (conflicting versions, outdated policies, contradicting FAQs, superseded amendments). The system must not just retrieve and summarize; it must detect disagreement between sources, judge which one to trust and why, and be transparent about the conflict rather than papering over it with a confident-sounding blended answer. | **Core architecture (minimum viable):**<br>● **Retriever agent** — pulls candidate passages relevant to the question (standard embedding/keyword retrieval is fine here — no need to reinvent this part).<br>● **Synthesizer agent** — drafts a candidate answer from the retrieved passages.<br>● **Critic/adversary agent** — actively tries to break the synthesizer's answer:<br>○ Cross-checks retrieved passages against each other for direct contradiction.<br>○ Checks for staleness (is there a more recent document that supersedes this one? Does the corpus have version/date metadata to exploit?).<br>○ Flags unsupported claims — assertions in the answer not actually backed by any retrieved passage.<br>● **Resolution step** — when a genuine conflict is found, the system doesn't silently pick one side. It must either (a) surface both positions with provenance ("Policy v1 says X; the March 2025 amendment says Y — the amendment supersedes it"), or (b) explicitly say it |
